THE TWELVE-TONGUES CORRESPONDENCE

PONTIFEX sweep — twelve languages, one shared corpus

Rendered from correspondence.csv (the source of truth) — 2026-10-11

M1 — AXONEME / עז (Oz) — 77

CANDIDATE BRIDGE — the canonical example reproduces: AXONEME=77 (Latin ordinal, native English spelling, ATTESTED) meets =עז77 (Hebrew, native, ATTESTED). Independent banks: G1, G3, G6. G4/G5 =עז77 rows are shared Phoenician inheritance, scored as echoes.

Language	Script form	Table used	Provenance tier	Independence note
english	AXONEME	English ordinal A=1..Z=26 (native)	ATTESTED	independent — Latin ordinal is not the abjad order
latin	AXONEME	latin_ordinal	ATTESTED	BANK IDENTITY with english — same table, counted once
hebrew	עז	mispar hechrechi	ATTESTED (native term, no transliteration)	independent — Semitic abjad, native spelling
aramaic		22-letter abjad	DERIVED (script-invariance demo)	BANK IDENTITY with hebrew — same values, counted once
arabic	عز	abjad, Eastern order	ATTESTED	independent table; cognate spelling — shares the Phoenician 22-order inheritance with Hebrew
greek	οζ	Milesian isopsephy	ATTESTED (table); transliterated Hebrew term	echo — 70=70, 7=7 by shared Phoenician inheritance
greek	OZ→οζ	Milesian isopsephy	ATTESTED (table); script-form CONSTRUCTED	echo — same inheritance as above
coptic	ⲟⲍ	Coptic alphabetic numerals	ATTESTED (table); script-form CONSTRUCTED	echo — Greek-descent Milesian, not independent

M2 — THELEMA / AGAPE — 93

GREEK-BANK PHENOMENON — THELEMA=θέλημα=93 and AGAPE=ἀγάπη=93, both authentic spellings on the attested table. Crosses to Coptic only by Greek descent. Does not cross to Hebrew (481/90), Arabic (591/1014), or Armenian (250/810).

Language	Script form	Table used	Provenance tier	Independence note
greek	θελημα	Milesian isopsephy	ATTESTED (table); authentic Greek word-form	independent — the bank's strongest convergence
greek	αγαπη	Milesian isopsephy	ATTESTED (table); authentic Greek word-form	collision with THELEMA — the classic equation
coptic	ⲑⲉⲗⲏⲙⲁ (authentic spelling)	Coptic alphabetic numerals	ATTESTED (table); authentic spelling	descent — Greek Milesian by inheritance, not corroboration
coptic	ⲁⲅⲁⲡⲏ (authentic spelling)	Coptic alphabetic numerals	ATTESTED (table); authentic spelling	descent — as above

M3 — ABRAHADABRA / HERU-RA-HA = 418

CONVENTION-SENSITIVE — ABRAHADABRA=418 lands unforced under the mechanical Hebrew transliteration and reproduces in Aramaic (identity) and Arabic; the Ge'ez Hebrew-fallback reproduces it with zero mergers. HERU-RA-HA=418 in Arabic, but Hebrew gives 423 mechanically — the established 418 needs the hand-built הרו־רא־הא (e-elision). Every 418 depends on transliteration choices; Semitic abjad inheritance carries the Hebrew↔Arabic agreement.

Language	Script form	Table used	Provenance tier	Independence note
hebrew	אבראהאדאברא	mispar hechrechi	CONSTRUCTED transliteration × ATTESTED table	unforced under the mechanical convention — hypothesis
aramaic	אבראהאדאברא	22-letter abjad	CONSTRUCTED transliteration × ATTESTED table	BANK IDENTITY with hebrew — counted once
arabic	أبراهادابرا	abjad, Eastern order	ATTESTED (table); script-form CONSTRUCTED	independent table; H→ه convention-dependent (H→ح shifts it to 421)
geez	አበረአሀአደአበረአ→Hebrew values	mispar hechrechi via fidel	word-form NATIVE-ish / map CONSTRUCTED	Hebrew-table evidence, zero mergers fired — candidate for the red pen, not an independent bank
arabic	(HERU-RA-HA) هرو را ها	abjad, Eastern order	ATTESTED (table); script-form CONSTRUCTED	collision with ABRAHADABRA in-bank — the Arabic 418 pair
hebrew	established) הרו־רא־הא (spelling	mispar hechrechi	author's hand-built spelling	418 only by e-elision; mechanical gives 423 — the fork is the red-pen question

M4 — CELL — 32

SINGLE-BANK FACT — CELL=32 lives in the Latin-script ordinal only. Greek refuses (85), Coptic refuses (85), Armenian refuses (125). Not a bridge; a calibration.

Language	Script form	Table used	Provenance tier	Independence note
english	CELL	English ordinal A=1..Z=26 (native)	ATTESTED	native spelling, native table
latin	CELL	latin_ordinal	ATTESTED	BANK IDENTITY with english — counted once

M5 — LIBERTY — 11

FILED AS CHANCE — LIBERTY=11 in the Chinese stroke-count column (CONSTRUCTED, scribe-chosen characters). 22 weighings × 6 targets; METHOD.md §5 applies. Not a bridge.

Language	Script form	Table used	Provenance tier	Independence note
chinese	自由 (scribe's choice)	stroke-count, PRC	CONSTRUCTED	chance coincidence — filed, not claimed
