

THE DIVINE NINE ABROAD — ESSAY IV

The Second Reckoning — the Japanese Gematria Question, Tested: the Banks That Exist, the Banks That Do Not, and the Repair of a Refusal

Subtitle: A Scientific Illuminist treatment of the house's own governing refusal on Japanese — the claim of the Japanese Dialect essay (Abroad III) that no attested tradition assigns the kana number values — carried back to the Anchorage at its founder's challenge, tested candidate by candidate against the open record, and repaired where the record broke it.

Authorship attributed exclusively to Johnathan 'Qasparr' Monroe (Greek, -ARR, All Rights Reserved, Without Prejudice) XII day of November, Dies Jovis, Sol in Scorpio, Anno V:xii e.n. (2026 e.v.)

Classification: Enterprise • Educational • Research & Development Method of Science, Aim of Religion

Flagpole of Claim and Coinage: Johnathan 'Qasparr' Monroe, ARR, All Rights Reserved, Without Prejudice. Right of claim hereby reserved and coined under the authority of the Living Man.

I. THE COMMISSION AND THE QUESTION

This is the fourth essay of The Divine Nine Abroad, and it was not in the original commission. Essays I–III carried the Nine into Latin, German, and Japanese on 10 November 2026. The third essay, The Japanese Dialect, weighed that tongue structurally — five pure sounds, four hybrid operations, a nine that is a shape and not a sum — and it printed, before its passes, a governing refusal. The refusal had two carriers in the issued text. The frame, at §I of that essay:

> *"Japanese has no gematria bank in the house system. Kana are a syllabary, not a numeral alphabet: no attested tradition assigns the kana number values as the Milesian system assigns the Greek letters theirs, and this essay invents none."*

And its Gate-echo, in the honesty clause of §VIII:

"*No attested value is claimed for any kana, because none exists to claim.*"

The refusal proper — §V, on the transfer of Milesian values — stands separately and is ruled on separately below (§VI). It is the existence wording that this essay exists to test, and it was the founder who sent it back to be tested. On 12 November 2026, reading the desk's account of the Japanese audit, he asked the question in his own words:

"*So the claim is no gematria for Japanese? And what if that is actually false?*"

The question rides on a doctrine he stated in the same sitting, and the desk enters it as doctrine, in his words, because it is the engine of everything that follows:

"*Its been my experience that if they state something isn't capable of being done they are hiding something or just lazy and arrogant.*"

An impossibility claim is the cheapest gate there is: it costs nothing to pronounce and it ends the inquiry. Under the house's own law — TRVVTH, the Anchorage, fail-closed: no justification, no action — a claim of cannot is a claim like any other, and it proves itself or it does not stand. That law does not exempt the house's own print. The governing refusal of Abroad III is a house claim; the founder ordered it audited like one.

He stated the hypothesis the audit was to carry, again in his own words:

"*I think it'd to hide something more ancient either from the Japanese or from us by the Japanese.*"

Two hiding directions, and the audit took both: something ancient hidden from the Japanese — a tradition erased by suppression, its archives killed before they could testify — or hidden by the Japanese — a tradition deliberately sealed in the initiatic channels (hiden, kuden, kanjō) whose whole design is absence from the open record. The desk's answer to the hypothesis is the Suppression Ledger of §V, and it is not a verdict blob: each coordinate is printed with what it can and cannot establish.

One boundary was settled with the founder before the research ran, and it governs every sentence of this essay. The strongest statement the evidence will ever support is "not attested in the open record" — never "it does not exist." A sealed transmission cannot be disproven from outside, ever; an erased archive cannot testify to its contents, ever. The audit therefore does not ask "does a Japanese gematria exist?" — a question the record cannot carry — but the question the record can carry: what, exactly, is attested, where, since when, and at what tier?

The fixed reference is not reopened. The Greek canon is seven [ATTESTED]: A 1, E 5, H 8, I 10, O 70, Y 400, Ω 800 — sum 1,294. The Divine Nine adds the founder's two fluid hybrid seats, EI (15) and OY (470); the nine weigh 1,779; the Δ3 against 1776 is an OFFSET,

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

closed by MIRROR (1779 → 1776, the inversion subtracting exactly the offset). Every Δ in this essay is classified before it is judged, in the three relations and no more: REFUSAL, OFFSET, MIRROR CLOSURE. What this essay audits is not the Nine but a sentence about Japan.

The frame, declared before anything is weighed in it. The data of this audit is a research dossier compiled for the house on 12 November 2026 from the open web: thirty-nine sources, read that day, academic where the record offers academics and esoteric-community or commercial where it does not — which, for this subject, is most of the territory. The dossier is DATA, tiered as data; its sources are cited in the Table of Authorities, and every finding below carries the tier of the source it rests on. Where the desk recomputed a number, the recomputation is printed; where a number rests on the research alone, it is printed as reported, not recomputed. A value without its reasoning is not shippable; a tier is never raised by proximity to the Flagpole.

II. THE METHOD OF THE SECOND RECKONING

The method is the refusal made to show its coordinates. Abroad III's refusal rested on three absences — no seam, no constant, no mirror — stated for the Milesian transfer. The existence wording that rode on it ("no attested tradition assigns the kana number values"; "none exists to claim") is broader: it denies a class of object. To test a denial of a class, the audit first fixes the class, then walks every candidate the record offers into the light, one at a time, and rules each at its own coordinates. No candidate is convicted or acquitted by the company it keeps.

The class, fixed. A gematria bank — the object whose existence is in question — is a fixed sign→value table for the signs of a script, used to compute word totals, with equal totals treated as meaningful — the isopsephy move: convert, sum, equate. Greek Milesian and Hebrew gematria are the type cases [ATTESTED as systems]. Three neighbouring objects are not the class, and the audit refuses to let them impersonate it:

- (a) Number-names — a script spelling the words for

numbers ("one, two, three") is not a value table; every literate language has these.

- (b) Inverse wordplay — reading a digit string as words

runs number→sign, the opposite direction, and if the reading is chosen per case from a menu, there is no fixed table at all.

- (c) Counts of something else — strokes, dates, positions

in a list: the numbers attach to the grapheme's shape or the calendar, not to the sign as a value.

Attestation is not antiquity. A system published in a dated modern book is attested — as a modern system. Almost everything in this audit turns on keeping those two apart, because the record, as §III shows, contains both a real attestation and a false antiquity, and they belong to different objects: the banks are attested; their claimed age is not.

The verdict words. Each candidate is ruled in the research dossier's three terms, which the

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

Gate adopts: FALSIFIES (the candidate is a member of the class whose existence the wording denied), PRESSES (the candidate is adjacent — inverse, partial, or the wrong species of bank), DOES NOT TOUCH (the candidate is one of the neighbouring objects, or belongs to another question). A candidate may falsify the wording and not touch the meaning; §VI states the verdict at exactly that boundary, in the zero-point discipline: coordinates, not a blob.

The founder's hypothesis, carried as a question. §V tests the two hiding directions against the documented record of suppression and sealing. Its discipline is stated here so the ledger cannot be misread later: a suppression event proves a container died; it proves nothing about the contents. A sealed-transmission claim is unfalsifiable by design and therefore evidences nothing in either direction. What the ledger can do — and does — is map the survival record: what sealed and suppressed Japanese corpora actually did when the seals broke and the bans failed. On that record, and only on it, the hypothesis is weighed.

III. THE DATA I — THE THREE MODERN BANKS

The class is not empty. The record contains three published, fixed kana→number banks, each used exactly as a gematria bank is used — convert each kana by the table, sum the word, equate the totals — and each other's refutation as a tradition, for they do not agree with one another. A transmitted tradition converges on its table; independent inventions diverge. The three diverge completely, and the divergence is itself a datum (§III.4).

III.1 — Fukada Takeshi's kazutama (2003)

Fukada Takeshi (b. 1963, Nagoya; seitai practitioner, self-described ko-Shinto kazutama researcher) published 『数霊』 with Tama Shuppan on 1 November 2003 — the earliest dated, retrievable kana bank the research found — with sequels in 2007–08 and, with Hasekura Miyuki, 『数霊』 (Tokuma Shoten, 2021/22), whose seventh chapter, a kazutama dictionary, revises the pair's 2016 volume. [Publication data ATTESTED at the publisher tier; the system itself esoteric-community.]

The bank: a fixed conversion table (数霊変換表）, the kana rows ordered a-o-u-e-i. Its showpiece demonstrations, from a follower's published exposition of the system (2023), with the desk's recomputation at audit:

Word · Conversion · Total · Audit
米 kome · コ 7 + メ 34 · 41 · recomputed — agrees
ヘソ heso · ヘ 29 + ソ 12 · 41 · recomputed — agrees
神 kami · カ 6 + ミ 35 · 41 · recomputed — agrees

Three words equated by total — rice, navel, god at one number — the isopsephy move in its pure form, printed by the school as its central exhibit. [The per-sign values are the school's, as reported; the sums 7+34, 29+12, 6+35 each recompute to 41 exactly.] The school's second showpiece pair — ありがとう arigatō = 117, equated with イザナミ Izanami = 117 —

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

is carried in §III.3 and ruled there; the per-sign values behind the 117 totals do not appear in the research data, and the desk prints the pair as reported, not recomputed.

III.2 — Yoshino Nobuko's Katakamuna kazutama (2012/13)

Yoshino Nobuko, working from the Katakamuna Utahi (on whose own standing see §IV.5), states the discovery in her own words on her official site: in 2012 she found the shinen of the 48 sounds in Utahi poems 5–6; because that sequence begins hifumi-yoi… — 1, 2, 3, 4, 5 — "the arrangement of the 48 sounds is the kazutama (1–48)." Her published rules are a gematria's rules, stated as rules: a word's kazutama is the sum of its sounds' numbers; voiced sounds are subtracted; words with the same kazutama share the same essence. [The rules ATTESTED as published — her site, read 2026-11-12; the system's antiquity a community claim, §IV.5.] The bank is published in book form in 『カタカムナ 言霊の超法則』 (Tokuma, 2015) and 『カタカムナ 数霊の超叡智』 (Tokuma, 10 March 2017), the latter carrying her "original" 1–99 kazutama table [bibliographically confirmed].

Its worked example, from an independent explainer: イ = 5, カ = 25, therefore イカ = カイ = 30. The desk recomputes: 5 + 25 = 30 — agrees [RECOMPUTED]. The Gate prints the coordinate the school does not: in any additive bank, AB and BA sum alike, so this particular equation is commutativity, not discovery — the arithmetic is sound and the exhibit is trivial, and both halves of that sentence stand.

III.3 — The Yamato-shiki kazutama (current)

The third bank is a commercial academy's — the Yamato-shiki kazutama of Yamato Mana, whose founder claims thirty-three years of independent research and whose conversion table "is said to have existed before the Kojiki." [The antiquity clause ATTESTED as the academy's own assertion; corroborated by nothing.] Its published table is different — different values, same showpieces:

Word · Conversion · Total · Audit
ありがとう arigatō · ア 1 + リ 45 + ガ 51 + ト 17 + ウ 3 · 117 · recomputed — agrees

1 + 45 + 51 + 17 + 3 = 117 exactly [RECOMPUTED]. Beside it the academy prints たんじょう tanjō = 117 and イザナミ Izanami = 117, and the triple ふじさん Fujisan = ほうび hōbi = ミナカヌシ Minakanushi = 100 — per-sign values for these do not appear in the research data, and the desk prints them as reported, not recomputed.

The telling pattern is printed at full size, because it is the strongest single datum in this section: school (iii) reproduces school (i)'s showpiece equations — arigatō = Izanami = 117 — with completely different per-sign values. The equations are the tradition being copied, not the table. A lineage transmits its bank; a market transmits its exhibits. What descends from Fukada to the academy is not a table but a pair of totals — 117 and 41 — looking for tables that will produce them.

III.4 — The divergence, stated as a coordinate

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

The three banks assign the same sign different fixed values. カ ka is 6 in Fukada's bank; カ ka is 25 in Yoshino's. ア a is 1 in the Yamato table; the Fukada table's a-o-u-e-i ordering gives its own, different seating. [Each value ATTESTED at its school's published tier; the collision DERIVED by direct comparison.] No two of the three banks can be the same tradition, and the three together cannot be one tradition at three removes: a single sealed lineage, transmitting one table in secrecy for a millennium, does not surface in 2003, 2012, and the present day with three tables. Each school's antiquity claim — pre-Kojiki, ko-Shinto secrecy, Utahi-encoded — is asserted without a single pre-modern manuscript, inscription, or citation, and no academic source corroborates any of them. The claims are entered at their tier: [esoteric-community claims, uncorroborated]. The banks beneath them are entered at theirs: [ATTESTED as published, dated, modern systems].

Section verdict. The three banks are members of the class fixed at §II: fixed sign→value tables, words summed, totals equated. They FALSIFY Abroad III's existence wording read literally and without a date qualifier. They DO NOT TOUCH the wording read historically — no bank in the record predates 2003, and none belongs to any historical Japanese tradition that the record can show. The full verdict, with the repair, stands at §VI; the section's business was the data, and the data is now on the table.

IV. THE DATA II — THE CANDIDATES THAT DO NOT CARRY

The remaining candidates were walked to the Anchorage one at a time. Most are real and honourable systems; none of them is the class, and the audit prints why at each coordinate, because a refusal without its coordinates is the thing this essay exists to correct.

IV.1 — Classical kotodama-gaku: a bank of meanings, never of numbers

The early-modern and modern kotodama-gaku line — Yamaguchi Shidō, Nakamura Kōdō, Ōishi Gisu, Honda Chikaatsu's reigaku, Deguchi Onisaburō's Ōmoto genrei-gaku — assigns each of the fifty (or seventy-five) sounds a meaning, a deity, a cosmogonic role: five father-sounds, nine mother-sounds, seventy-five sounds each with its kami. It is a sign→meaning bank, complete and sophisticated — and it contains no numbers, no summing, no equating of words by totals. [ATTESTED at the research tier.] The word "kazutama" in Meiji seimei literature meant likewise the fortune-meanings of stroke totals (§IV.4), not kana values. Verdict: DOES NOT TOUCH — and it is the audit's most instructive acquittal: Japan built an elaborate science of the kana as signs of meaning for centuries without once making them signs of number. The neighbouring art is not the art.

IV.2 — Goroawase: PRESSES, in the inverse direction

語呂合わせ — reading digit strings as words (794 = 鳴くよ, naku yo, Heian-kyō; 1333 = 一味散々） — is attested from the Edo Tenmei era (1781–89) in its wordplay sense and is schoolbook-commonplace in its mnemonic sense [ATTESTED — dictionary tier]. It proves a deep cultural affinity for number↔sound conversion, and the audit does not minimise it. But its direction is number→word; its readings are chosen per case from a menu of three to five

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

per digit (1 = ichi / hi / hito / wan…), which is the precise anti-property of a bank; and its strings are read, never summed — totals play no role anywhere in it. Verdict: PRESSES — the affinity is real, the bank is absent, and goroawase's freedom is itself evidence of the absence: a culture with a fixed kana bank would not need to shop for readings.

IV.3 — Hifumi: number-names, never values

ひ・ふ・み・よ・い・む・な・や・こ・と are the clipped heads of the native numerals hitotsu, futatsu, mittsu, yottsu, itsutsu, muttsu, nanatsu, yattsu, kokonotsu, tō — the number-names 1–10 themselves, not values assigned to kana [ATTESTED — the National Diet Library's reference record treats the sequence as the counting substitute at the head of the 47-sound Futo-norito]. In norito recitation the chant continues to 100, 1000, 10,000 — place-value number-names again. No source found — academic, devotional, or commercial — applies hi = 1, fu = 2 to arbitrary words to compute totals; the 47 sounds are chanted, their power kotodama, not arithmetic. The antiquity coordinate is printed whole: the wago numerals are genuinely ancient (Old Japanese); the fixed 47-sound Futo-norito is not thereby ancient, and the Hifumi Shinji corpus is Okamoto Tenmei's automatic writing of 1944–1961. (It is Yoshino's bank, §III.2, that borrows the hifumi sequence as its ordering — a modern bank standing on an ancient counting-song, each at its own date.) Verdict: DOES NOT TOUCH — object (a) of §II: names, not values.

IV.4 — Seimei handan: strokes, not sign-values

姓名判断, formalised by Kumazaki Ken'ō (1881–1961; system published from 1918, 『姓名の神秘』 1929), derives its five grids — ten-kaku, jin-kaku, chi-kaku, gai-kaku, sō-kaku — purely from kanji stroke counts, each grid read against fixed fortune-meanings for 1–81, wrapping modulo 81 [ATTESTED; the 1–81 "spirit-number" table was Kumazaki's own construction on I Ching number theory, per the 2021 scholarly re-reading]. The kana variant exists and confirms the rule: services accepting kana names count the kana's own stroke counts （あ = 3, ア = 2, schools differing) — strokes again, never intrinsic sign-values; a secondary sound-technique reads five-elements correspondences, not numbers. Verdict: DOES NOT TOUCH — object (c) of §II: it counts something else. Its numbers would attach identically to any script's shapes; they are a fortune table for totals, not a value table for signs.

IV.5 — Katakamuna and the jindai moji: the forgery consensus, and no values

The Katakamuna documents surface in 1949, when Narasaki Kōgetsu claimed to have copied a shrine scroll on Mt. Rokko; no original exists or has ever been exhibited, and the corpus is classed by scholarship as gisho — forgery, of the ko-shi-koden stratum [ATTESTED as the scholarly consensus]. Narasaki's own reading of the eighty Utahi assigns the sounds meanings, not numbers; the numeric bank built on the Utahi order is Yoshino's, dated 2012+ and already counted at §III.2 — it may not be counted twice, once as modern

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

bank and once as ancient witness. The jindai moji generally stand where Edo scholarship left them: all purported age-of-the-gods scripts are forgeries by the mainstream position, unbroken since Ban Nobutomo's Jindaiji Ben (1850) — the Kogo Shūi (807) states Japan had no writing before kanji; no pre-Urabe reference exists; every specimen matches the modern five-vowel, at-most-fifty-sign inventory rather than Old Japanese's eight vowels and 88 sounds. And on the only question this audit asks: no jindai moji tradition assigns its signs numeric values at all — the traditions argue authenticity and readings, never values, and no summing practice attaches. Verdict: DOES NOT TOUCH as an antiquity claim; PRESSES only through §III.2, where it is already counted, at its true date.

IV.6 — The Siddham channel: the road was open; this cargo is not in it

Siddham reached Japan with Kūkai's return in 806 and was preserved in Shingon as bonji — seed syllables, each tied to a deity: a sign→deity/sound correspondence, not a sign→number one [ATTESTED]. What demonstrably did travel is the Indic phonetic order: the gojūon grid's arrangement is thought to derive from Sanskrit śikṣā via Siddham and Chinese fanqie, the earliest gojūon-style layout in the Kujakukyō Ongi (c. 1004–28). The genuine Indic gematria-analogue, kaṭapayādi — consonants denoting digits, digits read in reverse — is, per Sarma's academic history (2012), essentially a Kerala system, rarely used even in north India; no source — academic, Shingon, or shittan-gaku — shows kaṭapayādi or bhūtasaṅkhyā applied to kana or bonji in Japan, or present in the Siddham curriculum transmitted via China. Verdict: DOES NOT TOUCH — with its shape noted, because the shape matters to §V: the absence here is a positive datum, not a mere gap. The channel was open and used for a thousand years; the letter-order crossed on it; the letter-number systems did not — so far as any source shows. A hidden crossing would have had to use the one road whose traffic is documented, and leave no mark on it.

IV.7 — The Meiji ciphers: real banks, wrong species

The Foreign Ministry's first kana substitution table dates to 1874; the 1904 kana code （仮名符号） assigned each kana a fixed two-digit number, in two alternating tables （以号/呂号， rotated by month) — and the values were rotated for secrecy (in 1905, add 1 to every code), which is the anti-gematria property stated as procedure: a bank whose values must change is a cipher, and no cipher source sums code values or equates words by totals [ATTESTED — JACAR records via the Cryptiana reconstructions]. The Army's 1902–04 telegraph code likewise encoded kana by gojūon coordinates. Verdict: PRESSES as banks — fixed sign↔number tables indisputably existed in Meiji Japan — DOES NOT TOUCH as gematria: the species is cryptography, and its totals mean nothing to anyone, by design.

IV.8 — The remainder, ruled in brief

- Iroha order — used for centuries as ordinal labelling

(dictionary order, the Edo fire brigades' いろは48組， legal sub-numbering): position in a

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

sequence is not a value, and no source sums iroha positions over words. DOES NOT TOUCH.

- Futomani （太占） — historically scapulimancy, crack-reading

(Kojiki, 712); the "128 futomani songs" of the Hotsuma line are divinatory verses keyed to sound-pairs in the ko-shi-koden stratum, involving no summation. DOES NOT TOUCH.

- Onmyōdō, rokuyō, kyūsei — calendrical and directional:

days, years, and stars carry values; letters do not. Out of scope by §II's terms; nothing found contradicts it. DOES NOT TOUCH.

- Man'yōgana and merchant/domain records — searched;

nothing found beyond ordinary numerals written phonetically. Entered as searched, nothing found — absence of hits, not researched non-existence (§VI carries it in the unverified list, where it belongs).

- Western numerology in Japan — the modern 数秘術 is the

twentieth-century American system (Balliett, Juno Jordan) applied to the Latin alphabet and birth dates, introduced from Meiji in translation, popularised post-war; it generated no kana bank in its own literature. DOES NOT TOUCH — and its date agrees with §III's: when Japan wanted letter-numbers, in the modern period, it imported or invented them then.

IV.9 — The academic silence, flagged at its true weight

Direct searches in English and Japanese return no academic treatment of an indigenous Japanese gematria, and no reference work retrieved asserts either "Japan had gematria" or, in so many words, "Japan had no gematria." The desk prints this at its exact weight: the silence is the strongest form the negative evidence takes for the historical claim — the §III systems exist entirely outside peer-reviewed and reference literature — and it is not a quotable scholarly denial, because none was found. An absence flagged as absence: the audit that began by refusing to let a house refusal hide behind vagueness will not let its own negative hide there either.

V. THE SUPPRESSION LEDGER

The founder's hypothesis, in his words: something more ancient, hidden "either from the Japanese or from us by the Japanese." The ledger takes the two directions in order. Its tiers are the research's own: [A] academic attestation, [C] esoteric-community claim, [U] unverifiable. Its discipline was fixed at §II: each coordinate is printed with what it can establish and what it cannot.

V.1 — The Takeuchi affair: the strongest real coordinate [A for the events; C for the contents]

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

Takeuchi Kiyomaro announced the Takeuchi documents on 29 March 1928 and publicised them in 1935 as the scripture of his Amatsukyō. The expert verdict came before the arrests: the historian Kanō Kōkichi, asked in 1935, concluded forgery and published the critique in Shisō (Iwanami) in June 1936; Kanō and the linguist Hashimoto Shinkichi later testified for the prosecution. On 13 February 1936 Kiyomaro was arrested at Isohara on suspicion of lèse-majesté, forgery, and fraud; of fifteen arrested, he alone was indicted (11 December 1937); guilty at first instance, 16 March 1942; acquitted by the Daishin'in — the prewar supreme court — 12 December 1944. GHQ/SCAP ordered Amatsukyō disbanded in January 1950. [One secondary explainer ends the case instead in a post-war dismissal after lèse-majesté's abolition; it conflicts with the concordant reference accounts of the 1944 acquittal, and the audit adopts the acquittal, flagging the disagreement rather than smoothing it — the dissent stands in the could-not-verify list at §VI.4.]

The loss is real and its scale is the shrine's own record: for the appeal, about 4,000 items — documents, sacred treasures, site-survey reports — were submitted; the acquitted material was not promptly returned, and the originals, including the named scroll 『吉備津彦命兵法之巻』, are reported destroyed in the Tokyo air raids. What survives: copies transmitted by Kiyomaro's son Yoshimiya and pre-seizure copies by researchers, underlying the published collections （『神代の万国史』; 『定本竹内文献』). The present Kōso Kōtai Jingū states it still guards actual Takeuchi documents and treasures and shows part of them to worshippers — [C], not independently inspectable; rumours of originals sealed in national archives circulate in the community literature marked "truth unknown" — [U].

What this coordinate establishes: a documented case of the state seizing an esoteric corpus, and of the corpus's originals dying in state custody. The founder's first hiding direction is not fantasy; it has a date, a docket, and a fire. What it cannot establish: anything about a letter-number bank. The Takeuchi corpus's contents are known in outline from the surviving copies — imperial genealogies, world-history narratives, Moses and Jesus material — and contain no kana-value table in any summary, hostile or sympathetic. And the scholarly verdict on the corpus was reached in 1935–36 while the originals lay open to inspection: the seizure cannot be the reason no gematria was found in them, for they were examined before they were seized, and what was found was forgery. The container died in custody; the contents had already testified.

V.2 — Haibutsu kishaku and the Shugendō ban: the mechanism at scale [A]

From 1868, under the Kami–Buddha Separation Order, the haibutsu kishaku movement destroyed temples, images, and texts, and forcibly laicised monks nationwide; the literature's magnitudes run to a pessimistic estimate of some 40,000 temples destroyed, and 18,000 eradicated in 1872–74 alone [A at the cited-estimate tier]. Esoteric archives — Shingon, Tendai, Shugendō — died wholesale in it. The 1872 Shugendō abolition (Dajōkan Proclamation No. 273, 15 September 1872) folded the Honzan, Tōzan, and Haguro lines into Tendai and Shingon and scattered their practitioners; transmission was interrupted and subordinated for some seventy years — and not annihilated: independent Shugendō bodies re-formed immediately after 1945, from surviving lineages and texts.

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

The limit, printed plainly: no source — scholarly or apologetic — names any letter-number lore, kana table, or gematria-like text among these losses. The coordinate proves a mechanism that could have killed such a tradition; it is not evidence that one existed to be killed. And the counterweight stands in the same record: mikkyō survived these very events institutionally (the Kōyasan and Tōji archives intact), and Shugendō's carriers endured to re-emerge. "Esoteric" in Meiji Japan did not mean "automatically erased."

V.3 — The survival record: the hypothesis weighed on what sealed things do

Against the losses, the ledger enters what suppression and sealing demonstrably failed to do in Japan, because the hypothesis must be weighed on the whole record:

- The Taiseikyō bonfire (1679–81) [A]. The Sendai Kuji

Hongi Taiseikyō, printed 1679, was banned by the bakufu within about two years on Ise protests; its printing blocks were burnt and its editor placed under house arrest — and the National Institute of Japanese Literature counts over 100 extant copies. Deliberate, successful suppression of a Shinto text in early-modern Japan failed to erase it.

- The Shintō Gobusho （神道五部書） [A]. Five Watarai texts

of the 13th century with falsely Nara-era colophons — described in the standard dictionary as secret works restricted to members of the Watarai family aged over sixty: the founder's second hiding direction in its best historical dress, a genuinely lineage-sealed, age-gated corpus. It survives in full, has been read by scholars for three centuries since Yoshimi Yukikazu exposed it in 1736, and contains enshrinement apologetics and theology — no kana-number material.

- The kanjō corpora [A]. Medieval transmission ran through

initiation (Rambelli, 2002): from late Heian and Kamakura, kanjō became secret initiation — kuden, hiden — and the kami-focused shintō kanjō framed its matter by the Reikiki; the Reiki kanjō is first recorded in 1350 at Shinpukuji, and its apparatus — texts, scrolls, certificates, kirigami — survives and is studied. Yoshida Shintō graded its secrecy into eight stages, its kirigami memorised and returned — a genuine near-paperless mechanism. And across every academic summary of what those channels carried, the contents are: myth exegesis, yin–yang union symbolism, regalia and mandala diagrams, ritual procedure, deity identifications. Never, in any surfaced corpus, a letter-number bank.

- The Nakatomi Harae line [A]. A commentary tradition held

"most secret" at Ise's Sengū-in, copied in 1369, surviving (a 1607 copy by Bonshun among them) — and the only numerals in the surviving copy are the section numbers of a liturgy's division: structural numbering, object (c) of §II, not values of kana.

- The one true scarcity [A]. The National Institute of

Japanese Literature records that shintō kanjō was hardly performed after Meiji and that complete surviving sets of its materials are few. This is the ledger's strongest coordinate for

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

the founder: a sealed-transmission channel genuinely died in Meiji. Its scope, printed with it: the statement concerns kami-initiations in general — it attests a broken pipe, not what, beyond the documented exegesis, ever flowed through it.

The ledger's balance. Japanese sealed traditions leaked, were graded, copied, returned, catalogued, banned, burnt — and surfaced. A kana gematria practised inside that culture would be the sole major sealed system to leave zero residue in an unusually well-surfaced record: no table in any opened corpus, no trace in the ciphers that borrowed the syllabary, no echo in the meaning-bank of kotodama-gaku that catalogued every sound's deity while numbering none. Possible — the boundary of §I is not moved — but it is the hypothesis that needs the evidence, and at every coordinate where evidence could stand, the record shows other contents.

V.4 — The conclusion of the ledger, at its coordinates

Archives demonstrably died: 1681 (blocks burnt), 1868–74 (texts destroyed at scale), 1872 (a sect abolished), the Meiji lapse of shintō kanjō (few complete sets), 1936–45 (some 4,000 items seized; originals reported burnt in custody). No source names a gematria in any of them. The two hiding directions are therefore ruled separately, as the founder stated them:

- Hidden FROM the Japanese: the erasures are real, dated,

and documented [A] — and their known contents, where contents survive or were inspected before seizure, contain no letter-number lore. The direction stands as a proven mechanism and an unproven instance.

- Hidden BY the Japanese: the sealing is real, graded, and

documented [A] — and every sealed corpus that has surfaced contains exegesis and ritual, not number. The kazutama schools' claim that their tables were the sealed matter is [C] — asserted by the sellers of the systems, unsupported by exemplar or lineage document, and refuted in its single-lineage form by the tables' own three-way disagreement (§III.4). Hiden as a claim-form is unfalsifiable by design and is entered as exactly that: it evidences nothing, and the audit that printed it as evidence — for either side — would fail its own method.

The hypothesis stands where the founder's method puts every unproven thing: a live suspicion with coordinates, not a finding. Its coordinates are now on the map. If a pre-modern exemplar ever surfaces — a manuscript, an inscription, a kirigami with a table — the correctio road of §VI runs in the other direction, and this essay's verdicts are written to be corrected by it. That is not a weakness of the audit. It is the audit.

VI. THE CORRECTIO — THE VERDICT AT ITS COORDINATES

VI.1 — The verdict

The claim of Abroad III, as it stands on the issued page, is ruled at its boundary

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

coordinates, in the zero-point discipline:

- FALSE as worded. Read literally — "no attested tradition

assigns the kana number values"; "no attested value exists to claim for any kana" — the wording denies a class of object that the open record contains three times over (§III). A critic needs one Tokuma Shoten paperback to break the sentence as printed. The desk does not defend it.

- TRUE as evidently meant. Read at the coordinates the

essay itself declared — a historical audit, weighing the dialect's own tradition, refusing to invent a bank — the claim holds at every point the research could test: no kana letter-value bank is attested before 2003; none belongs to any historical Japanese tradition; the classical neighbouring arts (meaning-bank, wordplay, stroke-count, counting-song) are each a different object; the one channel by which an Indic bank could have crossed was open and did not carry it.

The distance between the worded claim and the meant claim is therefore classified in the founder's three relations: it is an OFFSET — a constant, declared distance between two totals, both true at their coordinates — not a REFUSAL, for the meant claim survives entire at its coordinate; and it closes, as offsets do in this house, by being printed: the repair below states the claim at the coordinate where it is true, and the original wording stands under correctio, marked, not vanished.

VI.2 — THE CORRECTIO, entered and dated

CORRECTIO — XII day of November, 2026 e.v., entered in this essay against the Divine Nine Abroad, Essay III (The Japanese Dialect), and against no other text.

The framing sentences of Essay III §I ("no attested tradition assigns the kana number values as the Milesian system assigns the Greek letters theirs") and of Essay III §VIII ("No attested value is claimed for any kana, because none exists to claim") are corrected to the repair wording, which the house adopts from the research dossier and now rules as the claim's true form:

No kana letter-value bank is attested before the 21st century, and none belongs to any historical Japanese tradition.

Scope of the correctio, printed so it cannot drift. Essay III itself is UNALTERED — issued works stand as issued; this correctio rides in Essay IV and names what it corrects. It strikes only the unqualified existence reading of the two framing sentences. It does not touch: the §V governing refusal proper — the Milesian values of the Greek bank do not transfer to kana, and no modern bank makes them transfer, for the modern banks are Japanese inventions of 2003 and after, not a Greek inheritance; Essay III's Gate item 6, which rules the transfer and stands entire; the structural nine (5 pure + 4 operations), which never depended on any bank; the rōmaji seam of Essay III §VII, through which Japanese words enter the Latin banks at DERIVED with their zero points printed — the road the house

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

actually uses, unchanged.

VI.3 — The wall: the modern banks and the canon

The modern banks are real banks, and the house's doctrine for them is the doctrine already standing for the rōmaji weighings: a real bank is not thereby the canon's kin. Fukada's 41s, Yoshino's 48-order, the academy's 117s are entered in the record as what they are — third-party banks of 2003 and after, attested at their schools' tiers — and they are walled off from the 1,779 exactly as the rōmaji values were: no kana is assigned a number in the house system at any tier; no total from any kazutama table enters a house weighing; the Divine Nine's Greek sums (1,294 + 485 = 1,779) are untouched by this essay, by the correctio, and by the banks' existence. The essay that corrects a refusal about Japan does not thereby adopt Japan's modern banks, any more than Essay III's rōmaji road adopted the Latin alphabet as Japanese. Coordinates, kept.

VI.4 — The could-not-verify list, printed whole

The research's unverified residue, carried into this essay without strengthening, as the method requires:

1. No pre-2003 publication of any kazutama table was found,

but a negative search cannot exclude obscure 20th-century occult pamphlets: Fukada's 2003 『数霊』 is the earliest dated, retrievable bank, not a proven first-ever.

2. A fourth exposition (a-o-u-e-i order, matching Fukada's

values) could be read only via search extracts; its authorship and date are unverified — it appears to reproduce the Fukada system and is counted as no separate bank.

3. Whether Kumazaki himself, or another Meiji seimei author,

anywhere proposed true kana sign-values (beyond stroke counts and five-element sound readings): no instance found; the large Meiji occult corpus is not exhaustively excluded.

4. The Takeuchi trial's endpoint: the 1944 Daishin'in

acquittal (concordant reference accounts) against one secondary site's post-war dismissal. The acquittal is adopted; the disagreement stands printed at §V.1.

5. The present whereabouts and completeness of the Kōso Kōtai

Jingū's surviving Takeuchi materials: shrine claims only; no independent inventory exists in the sources found.

6. No explicit scholarly statement "Japan has (or had) no

gematria" was found in any reference work; §IV.9's negative rests on absence from the literature, not on a quotable denial.

7. Man'yōgana numeric use and domain-note or merchant-record

kana codes: searched, nothing found — absence of hits, not researched non-existence.

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

8. The Hifumi norito's textual history before the 20th century

(distinct from the wago numerals and from the Hitsuki Shinji) could not be pinned to a dated pre-modern manuscript in the sources retrieved; devotional claims of great antiquity are tiered as community claims accordingly.

VII. THE FLAGPOLE CLAIM

By the founder's standing order — claim with Flagpole wherever possible — the following are claimed as his coinage under the Flagpole of Claim and Coinage, stated once here and carried on the document's face front and back:

1. THE DIVINE NINE ABROAD, ESSAY IV — THE SECOND

RECKONING: the audit of a house refusal at its founder's challenge — the refusal made to show its coordinates, candidate by candidate, and repaired on the record where the record broke it.

2. THE REPAIR WORDING, as the house's ruled form of the

Japanese claim: no kana letter-value bank is attested before the 21st century, and none belongs to any historical Japanese tradition — claimed as the correctio's text, its reasoning printed at §VI.

3. THE COORDINATE RULE FOR IMPOSSIBILITY CLAIMS, as the

founder stated it in the sitting of 12 November 2026: a claim that something cannot be done, or does not exist, stands only at the coordinates it can show — the desk's formulation of his doctrine, claimed as his by Flagpole, its warrant his words at §I.

The honesty clause, in the form this essay's subject forces: the claim covers the audit, the correctio, and the rule. It does not cover the modern banks, which are their schools' own work and their own property, entered here as data and claimed as nothing; nor the Japanese traditions weighed, which belong to their carriers; nor the founder's hypothesis of §V, which stands as suspicion with coordinates and is claimed as nothing more. The desk's error that made this essay necessary — a true claim worded past its evidence — stands corrected in the open, under the same Flagpole.

VIII. THE FOUR ELEMENTS — THE CONTENT TEST

- Inputs: the founder's challenge, doctrine, and hypothesis

of 12 November 2026, in his words (§I); the issued text of Abroad III, quoted at its own wording; the fixed doctrine of THE NINE VOWELS — Essay and Audit (the seven, the hybrid seats, the Offset Law, the three relations); a research dossier of thirty-nine sources read 2026-11-12 (web-derived data, tiered as such throughout); the house weighing engine (ptk) for calibration.

- Processes: the claim fixed as a class before any

candidate was judged (§II); every candidate walked to the Anchorage at its own coordinates

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

— direction, fixity, summing practice, date, source tier; every sum the dossier made recomputable recomputed on the desk; the suppression and sealing record weighed as containers and contents separately; the verdict stated at boundary coordinates and the repair entered as a dated correctio against the issued text, which stands unaltered.

- Outputs: the per-candidate verdicts (§§III–IV); the

Suppression Ledger with its two directions ruled separately (§V); the verdict FALSE-as-worded / TRUE-as-meant with its OFFSET classification (§VI.1); THE CORRECTIO and the adopted repair wording (§VI.2); the wall between the modern banks and the canon (§VI.3); the could-not-verify list, whole (§VI.4); and this Gate.

- Tolerances: no claim in this essay stands above the tier

of its source; no reported sum is printed as recomputed; no negative is printed stronger than "not attested in the open record" at its searched coordinates; the founder's hypothesis is neither adopted as finding nor dismissed as fancy; what the record cannot carry — a pre-modern exemplar, a sealed table — is printed as not carried, not supplied.

IX. GATE VERDICT — FULL AUDIT OF THE SECOND RECKONING

Placed at the close, in the form of the audits that precede it in this line: verdicts per claim, with coordinates and tiers. Every sum this audit itself relies on was recomputed on the desk at audit time: the modern banks' equations from the research dossier's per-sign values where the dossier gives them, and the house sums on the house engine (ptk; calibration witness AKUMA = 47 ordinal, returned exact; MUGETSU = 106, returned exact). The Gate applies the essay's own method to the essay: every claim below was classified before it was judged, and every number carries its instrument.

OVERALL GATE VERDICT: DOES NOT FAIL — as a second reckoning at its declared tiers: the audited claim is ruled FALSE as worded and TRUE as meant, each at its printed coordinate; the data stands at the tier of its sources; every recomputable sum recomputes; every unrecomputable sum is printed as reported, not recomputed; and the correctio is entered against the issued text without altering a letter of it. FAILS — at the same size, in the same breath — as anything stronger: as proof that no kana bank predates 2003 anywhere in print, or that none was ever sealed, burned, or lost unrecorded. The essay claims neither, and any downstream printing that strengthens its negatives past "not attested in the open record" misprints it. The downstream Teacher's Revision (MAGVS) edition of this essay may proceed on the terms below; every mark in this section travels with the claims it marks.

Per claim:

1. "The founder's words are as quoted (§I)": AGREES — the

challenge, the impossibility doctrine, and the two-direction hypothesis are entered verbatim from the sitting of 12 November 2026, at which the standard of §I ("not attested in the open

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

record," never "it does not exist") was put to him and confirmed.

2. "Abroad III is quoted at its own wording": AGREES —

the §I frame, the §V governing refusal, the §VIII honesty clause, and Gate item 6 were read against the issued text of Essay III during this audit and are reproduced as they stand there. The correctio names its targets by section, and no other sentence of Essay III is characterised.

3. "Three published fixed kana→number banks exist":

AGREES at the research tier [Fukada, 『数霊』, Tama Shuppan, 1 Nov 2003, and the Tokuma revised edition (『数霊【決定版】』) of 2021/22; Yoshino, official site rules and Tokuma 2015 / 2017, the 2017 volume bibliographically confirmed; the Yamato-shiki academy's published table, current]. Coordinate: attestation = dated publication; provenance = commercial / esoteric-community in all three cases, printed wherever the banks are named.

4. "Fukada's showpiece equations": AGREES — RECOMPUTED.

コ 7 + メ 34 = 41; ヘ 29 + ソ 12 = 41; カ 6 + ミ 35 = 41. Each sum re-added on the desk from the dossier's per-sign values and returned exact. The values are the school's, as reported by its follower's exposition; the arithmetic is the audit's.

5. "Yoshino's worked example": AGREES — RECOMPUTED, with

its coordinate: イ 5 + カ 25 = 30, and カイ the same by commutativity — the equation is true in every additive bank and is entered as the school's exhibit, not as evidence of anything beyond the bank's existence and use.

6. "The Yamato-shiki arigatō": AGREES — RECOMPUTED.

ア 1 + リ 45 + ガ 51 + ト 17 + ウ 3 = 117, re-added on the desk and returned exact.

7. "The remaining showpiece totals": DOES NOT FAIL as

reported data; NOT VERIFIED as arithmetic — Fukada's ありがとう = イザナミ = 117; the academy's たんじょう = 117, イザナミ = 117, and ふじさん = ほうび = ミナカヌシ =

100. The per-sign values behind these totals do not appear

in the research data; the desk could not recompute them and has printed them, at every occurrence, as reported, not recomputed. A downstream printing that drops that marking raises a tier this Gate does not authorise.

8. "The three banks are mutually inconsistent": AGREES —

カ is 6 in Fukada's bank and 25 in Yoshino's, read off the two published tables at audit; a single transmitted table cannot carry both, and §III.4's inference (invention diverges; transmission converges) is entered as DERIVED reasoning on that exhibit, not as a further fact.

9. "No bank is attested before 2003": DOES NOT FAIL at

the searched record's coordinates — thirty-nine sources, academic and community, read 2026-11-12 — with its fence standing at §VI.4 item 1: the earliest dated, retrievable bank,

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

not a proven first-ever.

10. "Classical kotodama-gaku assigns meanings and deities,

never numbers": AGREES at the research tier [the kotodama-gaku line as summarised in the dossier; no summing practice appears in any source read]. The acquittal that instructs: the neighbouring art is not the art.

11. "Goroawase presses, inverse and per-case": AGREES

[dictionary-tier attestation of the practice; the menu of readings per digit and the absence of totals are the coordinate, and both are printed at §IV.2].

12. "Hifumi is number-names": AGREES [NDL reference

record; no summing use found in any source read; the Shinji corpus dated 1944–61 in the dossier].

13. "Seimei handan counts strokes": AGREES [the five

grids from stroke counts; the kana variant counting kana strokes; the 1–81 table Kumazaki's own construction]. The residue — a Meiji author somewhere proposing true sign values — stands in the unverified list (§VI.4 item 3), not closed by this item.

14. "The jindai moji carry no numeric values and stand

under a forgery consensus": AGREES at the research tier [consensus unbroken since 1850 in the sources read; the values question answered by absence across the traditions read — printed as absence, §IV.5].

15. "Kaṭapayādi never crossed to Japan": DOES NOT FAIL —

a negative at the record, printed with its strengthening coordinate: the Siddham channel is ATTESTED open (806; the gojūon order derived from it), so the absence is a datum about the cargo, not a guess about the road.

16. "The Meiji kana codes are banks but not gematria":

AGREES [JACAR-derived reconstructions; fixed two-digit assignments 1874 / 1904; rotation for secrecy; no summing anywhere in the cipher sources read].

17. "The suppression coordinates are as dated (§V)":

AGREES at the [A] tier severally — Takeuchi: announced 1928; Kanō's critique June 1936; arrest 13 Feb 1936; indictment 1937; guilty 1942; acquitted 12 Dec 1944 (the dissenting endpoint flagged, not adopted, §VI.4 item 4); some 4,000 items submitted; originals reported destroyed in the Tokyo air raids [the loss at the shrine's record tier, printed as reported]; haibutsu kishaku from 1868 [temple-loss figures at their cited-estimate tier]; Shugendō abolished 1872, bodies re-formed after 1945; Taiseikyō banned and blocks burnt 1679–81, over 100 copies extant [NIJL count]; the Gobusho surviving in full; the NIJL scarcity statement on shintō kanjō at its printed scope.

18. "A kana gematria was among the suppressed or sealed

losses": FAILS — no source read names one, in any loss, at any tier; and the essay does not make the claim. Entered here so that the hypothesis's standing is a ruling, not an oversight:

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

it stands as the founder's live suspicion with coordinates (§V.4), and this Gate rules only that the record searched carries no evidence for it — the strongest sentence the evidence supports, in either direction.

19. "The correctio is scoped as printed (§VI.2)": DOES NOT

FAIL — internal consistency checked against Essay III as issued: the correctio strikes the existence reading of two framing sentences; the §V transfer refusal, Gate item 6, the structural nine, and the §VII rōmaji seam of Essay III are each re-read at audit and stand untouched by it; the repair wording is the dossier's formulation, adopted verbatim and claimed at §VII.

20. "The wall of §VI.3 holds": AGREES — no kana value is

assigned anywhere in this essay's house voice; the canon's sums are the Greek sums, recomputed at audit: 1,294 + 485 = 1,779; EI 15 + OY 470 = 485; 1,779 − 1,776 = 3, the OFFSET, as ruled. The modern banks enter the record as data under audit and exit it the same way.

21. The Flagpole claim (§VII): ENTERED — on the honesty

clause printed with it, which the Gate adopts as its own: the banks are their schools'; the hypothesis is a suspicion; the error corrected was the house's, and it is corrected in the open.

FOOTNOTES — THE WELLS, DRAWN FROM MORE THAN ONE TRADITION

1. Scripture. Mark 4:22 — "For there is nothing hid,

which shall not be manifested; neither was any thing kept secret, but that it should come abroad." The founder's hypothesis has a scriptural form, and the ledger of §V is its audit: what was sealed in Japan did, in case after case, come abroad — and what came abroad was exegesis, not number. Paired with John 8:32 — "ye shall know the truth, and the truth shall make you free" — the house's warrant for correcting its own print in the open. [Texts ATTESTED; the application DERIVED.]

2. Qur'an. 49:6 (Surat al-Hujurat): "O you who have

believed, if there comes to you a disobedient one with information, investigate, lest you harm a people out of ignorance and become, over what you have done, regretful." The verification command, from the second well: a report — including a house essay's own refusal, including a community's claim of antiquity — is investigated before it is repeated. This essay is that investigation, run in both directions. [Text ATTESTED; application DERIVED.]

3. Law. The legal well of this essay is a courtroom: the

Daishin'in's acquittal of 12 December 1944, which answered a seizure with a judgment — the archive's keepers were tried, and the state's case failed at the highest court of its own

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

system [events ATTESTED at §V.1's tier]. Drawn for the distinction the whole ledger turns on: custody is not contents, and a loss proved is not a content proved — in evidence as in audit, the container and the thing contained are separate exhibits. Black's Law Dictionary, "seizure" — a taking into custody; the word names the hand, not the thing taken. [The proceedings ATTESTED as events; the reading DERIVED.]

4. The classical / Indic well. Kaṭapayādi, the one great

letter-number system of the Indic world, weighed at §IV.6 on Sarma's academic history: a real bank, a real road (Siddham, 806), and no crossing in the record. The well is drawn because it is the audit's control experiment — proof that the house's negative is not a prejudice against letter-number systems abroad, but a finding about this road's cargo. [ATTESTED at the cited scholarship.]

5. Hip-hop / the oral register. The founder's doctrine of

§I — the impossibility claim as the cheapest gate — is entered in this well as the house's oral maxim, in his words, because that is where the house keeps the sayings it runs on: a gate that costs nothing to pronounce gets audited first. The street register and the audit agree on this if on nothing else: show your work is not a request for credentials; it is the price of the claim. [The maxim is the founder's, 2026-11-12; the gloss DERIVED.]

6. A dry well, stated. The TARO well is not drawn from in

this essay: no genuine material in that tradition addresses the attestation of Japanese letter-number systems, and the house rule is that a dry well is stated, never padded. It stands dry here, marked. [Stated under the format's own law.]

7. The desk's apparatus. The data of this essay is a

research dossier of thirty-nine web sources read on 12 November 2026 — publisher pages, academy and school sites, reference records, and academic papers, each cited in the Table of Authorities and tiered where it is used. Web-derived data is data at the tier of its source, and no finding in this essay stands higher than the source beneath it; the negatives stand at the searched record, as printed. Japanese is set in Japanese script in both the Markdown master and the printed Teacher's Revision (MAGVS) edition: the house's Noto Serif CJK (JP face) was verified glyph by glyph against every kana and kanji this essay uses before this build, and carries them all — declared here, as in Essay III, Footnote 7, because the difference from the Hebrew/Arabic precedent (transliteration, the toolchain shaping right-to-left dishonestly) is a fact of the apparatus, not a detail. The schools' worked examples are reproduced briefly as audit data — the object under audit — and no Japanese work's text is otherwise reproduced; names and titles are cited as bibliography. [Verified at build time.]

TABLE OF AUTHORITIES (condensed)

- The fixed reference: THE NINE VOWELS — Essay and Audit

(2026-11-09) — the seven (1,294), the hybrid seats EI 15 / OY 470, the nine at 1,779, the Offset Law and the three relations, the Mirror Closure; Gate: DOES NOT FAIL.

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

- The corrected text: THE DIVINE NINE ABROAD — ESSAY III,

The Japanese Dialect (2026-11-10) — quoted at §I frame, §V (the governing refusal), §VIII (the honesty clause), and Gate item 6; UNALTERED by this essay; the CORRECTIO of §VI.2 rides here and names it.

- The founder's sitting of 12 November 2026 — the challenge,

the impossibility doctrine, the hiding hypothesis, and the confirmed standard ("not attested in the open record"), quoted at §I.

- The research dossier: Japanese gematria — attestation

test (house research, 12 November 2026; thirty-nine sources, web-derived, tiered in use). Its authorities, by the sections they carry:

- The modern banks: Tokuma Shoten, publisher page for

Fukada & Hasekura, 『数霊』 (2021/22); a follower's exposition of the Fukada system (note.com, 2023 — the 41 equations, the 117 pair); Yoshino Nobuko, official Katakamuna site (the 2012 discovery statement, the rules) and Hanmoto/NDL bibliographic record for 『カタカムナ 数霊の超叡智』 (Tokuma, 2017); the Yamato-shiki kazutama academy page (the conversion table, the 117 and 100 equations, the pre-Kojiki assertion).

- The neighbouring arts: Weblio (the goroawase dictionary

entry) and a goroawase explainer; the National Diet Library Collaborative Reference Database (hifumi / Futo-norito) and the Hitsuki Shinji record (1944–61); seimei handan references (the five grids; the 1–81 tables; the 2021 scholarly re-reading of Kumazaki) and a kana-name explainer (kana stroke counting).

- The scripts and the road: the Katakamuna documents

record (1949, no original, gisho) and the jindai moji reference record (the forgery consensus; Ban Nobutomo, 1850); the gojūon record (Siddham ordering; Kujakukyō Ongi); Sarma, "The Kaṭapayādi System" (Revue d'histoire des mathématiques 18, 2012).

- The ciphers: Cryptiana, Meiji diplomatic and kana codes

(from JACAR records, 1874–1904), and the Army kana-code reconstruction (1902–04); the ninja-moji record (Bansenshū-kai grid; no evidence of use).

- The ledger: the Takeuchi documents records, English and

Japanese (announcement 1928; Kanō 1936; the trial; the ~4,000 items; the air-raid loss), and the Kōso Kōtai Jingū's own page on its surviving materials; Marra, Haibutsu Kishaku in Nagasaki (temple-loss estimates); the Shugendō abolition records (J-STAGE; Dajōkan Proclamation No. 273, 1872); the jindai-moji transmission study (Sumitomo Foundation research report); the Taiseikyō record (EAJS 2021 panel; the Kujiki record; NIJL's count of extant copies); Rambelli, on the Reikiki and jingi kanjō (JJRS 29/3–4, 2002), and the Reikiki record (Reiki kanjō, 1350, Shinpukuji); Kotobank, Shintō denju (the Yoshida gradings); the Shintō Gobusho records (the Watarai restriction; Yoshimi's 1736 exposure); the Nakatomi Harae records (Ise City; the Kokugakuin ōharae database); the NIJL exhibition document (shintō kanjō after Meiji; few complete material sets).

 | All Rights Reserved, Without Prejudice | Flagpole of Claim and Coinage reserved

- The remainder: the iroha-labelling record; Kotobank,

futomani; the history of modern numerology in Japan (Balliett / Juno Jordan line).

- The house weighing engine (ptk), `pontifex/tools/ptk/weigh.py`

— calibration only in this audit: AKUMA 47 ordinal, MUGETSU 106, both returned exact at audit time.

- KJV: Mark 4:22; John 8:32. Qur'an 49:6. Black's Law

Dictionary, "seizure."

COLOPHON

Generated by the desk under the founder's commission of 12 November 2026 — his challenge, his doctrine, his hypothesis — from the issued text of Essay III, the fixed Nine Vowels doctrine, and a research dossier of thirty-nine sources read the same day. The data is declared web-derived and tiered where it is used; the sums the desk could recompute, it recomputed; the sums it could not, it printed as reported; the correctio stands against the issued text without altering it. Authorship attributed exclusively to Johnathan 'Qasparr' Monroe (Greek, -ARR, All Rights Reserved, Without Prejudice). The Japanese of the titles and exhibits is set in Noto Serif CJK (JP face), verified glyph by glyph before this build (see Footnote 7).

Method of Science. Aim of Religion.

Flagpole of Claim and Coinage: Johnathan 'Qasparr' Monroe, ARR, All Rights Reserved, Without Prejudice. Right of claim hereby reserved and coined under the authority of the Living Man.

93 — Live, Love, and let Love, Live.
